## Corporate Wellness | Activity Tracker

The Ultimate App Designed around Branding

### How does the Reflex compare with big brand names?

- The Reflex tracks all your daily activity in terms of steps and monitors your sleep without any interaction from you.
- Compete against friends & family, share your progress on Facebook and Twitter.
- Includes alarm function, sedentary reminders, and much more.
- Best of all, the battery goes 3-4 weeks between charges - not 2-3 days.

### Who supports the actual end user?

- FITINCLUDED as a Brand and Website is there to support end users - just direct all inquiries to fitincluded.com.
- Nobody else in the Ad Specialty arena is prepared to support end users.
- FitIncluded supports iOS, Android, with Microsoft support coming soon.

### Where can I brand my logo?

- The Reflex is designed around corporate branding.
- TWO Imprint locations - One front and center! One that is low profile.
- Our Customized App allows companies to brand their logo in seven different places inside the app using our groups feature.

### What is the "groups" feature?

- Once you hand them out, tell your users to join your "group."
- Keep your group to only your users by password protecting it, or open it to anyone. We give you the option.
- When users join the group, they will see seven different logo customizations, gain access to unique group leaderboards, and have direct links to your website all within the app.

### What about my wellness administrator?

- With each group comes one corporate admin login.
- The admin will have the ability to manage all the logo customizations.
- The admin can view all the users in their group and download all the daily step totals.

Now just *imagine* the possibilities.
